Prottoy Zaman

pza46@sfu.ca | 236-335-8774 | zmn05.github.io | linkedin.com/in/prottoy-zaman/ | Vancouver, BC

EDUCATION

Simon Fraser University, Burnaby, BC **Expected Graduation Date:** June 2029

- Bachelor of Science in Computing Science

TECHNICAL SKILLS

Languages: Java, Python, PHP, SQL, TypeScript/JavaScript, C#, C/C++
Backend & Data: PostgreSQL, REST APIs, Prefect
Frameworks & Libraries: React
Developer Tools: Git/GitHub, Postman, Visual Studio Code, IntelliJ, AWS
AI-Assisted Development: Claude Code, ChatGPT Codex, Copilot

WORK EXPERIENCE

Junior Full-Stack Developer Co-op Sep. 2025 - Apr. 2026
Operto Guest Technologies, Vancouver, BC

- Investigated production issues by reviewing application logs and querying PostgreSQL databases, validating data across QA and production environments to identify root causes and support accurate fixes
- Implemented and tested backend changes across application services and data flows, creating and updating integration tests to verify expected behaviour and reduce regression risk
- Owned the implementation of the migration of legacy webhook endpoints to a unified event-driven system by building Prefect workflows and validating transitions and downstream delivery
- Collaborated with Customer Success and engineering teammates to clarify business requirements, investigate reported issues, incorporate feedback, and deliver maintainable production changes
- Modified React and TypeScript frontend logic to implement role-based access control for administrator and non-administrator users, improving internal customer-onboarding workflows

PROJECTS

Land Grab | *Python, Sockets, PyGame*
Data Communications and Networking (CMPT371), **SFU** Mar. - Apr. 2025

- Developed a fast-paced multiplayer game inspired by *Stake Your Claim* from Mario Party, using TCP sockets to handle real-time communication between a server and multiple concurrent clients.
- Implemented server-side concurrency, resource locking, and region-claim logic to ensure fairness and synchronization between players
- Executed robust and functional tests for client-server message handling, validating correctness of move commands, state synchronization, latency handling, and thread-safe data sharing with locks

FitCheck | *React, OpenWeatherMap API, Gemini API*
Introduction to Software Engineering (CMPT276), **SFU** Oct. - Dec. 2024

- Developed a web application using ReactJS to help users manage their fashion choices and receive AI-driven outfit recommendations
- Debugged application errors by working in an Agile team environment, leading to an improvement in system stability
- Implemented real-time data synchronization between OpenWeatherMap API, user wardrobe, and Google Gemini chatbot, enhancing the accuracy of AI outfit recommendations

Course Planner | *Java, Spring Boot, REST API, Postman*
Object Oriented Design In Java (CMPT213), **SFU** Nov. 2024

- Debugged and validated RESTful API functionality using Postman, ensuring accurate data retrieval and proper request handling between client requests and server responses
- Applied Object-Oriented Design (OOD) principles such as encapsulation to reduce coupling between models, controllers, and services, improving maintainability and scalability
