Prottoy Zaman

236-335-8774 | pza46@sfu.ca | zmn05.github.io | linkedin.com/in/prottoy-zaman | Vancouver, BC

Education

Simon Fraser University — Burnaby, BC
Bachelor of Science in Computing Science — **Expected Graduation Date**: June 2029

Experience

Junior Full-Stack Developer Co-op — Sep. 2025 – Apr. 2026
Operto Guest Technologies — Vancouver, BC

- Implemented Java and Spring Boot webhook parsing and validation against third-party API specifications, ensuring incoming payloads were handled correctly
- Owned the migration to a unified webhook endpoint using Python and Prefect, updating legacy registrations and AWS configuration and validating downstream delivery.
- Implemented backend changes across application services and data flows, creating and updating unit and integration tests to verify expected behaviour and guard against regressions
- Investigated production issues using application logs and PostgreSQL queries, comparing QA and production data to identify root causes and validate fixes
- Introduced role-based access control in React and TypeScript for administrator and non-administrator users in internal customer-onboarding workflows
- Collaborated with Customer Success and engineering teammates to clarify requirements, investigate reported issues, and incorporate feedback into production changes

Projects

SightSee | *React, TypeScript, Express, PostgreSQL* — June – July 2026

- Built a Vancouver trip-planning interface with time and interest constraints, Google Maps visualization, and interactive stop removal and itinerary regeneration
- Implemented saved-itinerary retrieval and read-only sharing across React, Express, and PostgreSQL, enforcing owner and recipient permissions with revocable access
- Developed typed API clients and automated component and integration tests for authentication, itinerary editing, sharing, and failure states

Land Grab | *Python, Sockets, Pygame* — Mar. – Apr. 2025

- Built a multiplayer game inspired by *Stake Your Claim* from Mario Party, using TCP sockets for real-time communication between a server and multiple concurrent clients
- Implemented server-side concurrency, resource locking, and region-claim logic to keep player actions synchronized and enforce fair access to shared regions
- Conducted manual tests for client-server message handling, move commands, state synchronization, latency handling, and thread-safe data sharing with locks

FitCheck | *React, OpenWeatherMap API, Gemini API* — Oct. – Dec. 2024

- Developed a React web application to help users manage their wardrobes and receive AI-driven outfit recommendations
- Collaborated in an Agile team to debug application errors and improve stability
- Synchronized weather data from the OpenWeatherMap API and user wardrobe data with the Google Gemini chatbot to inform outfit recommendations

Technical Skills

- **Languages:** Java, SQL, Python, PHP, TypeScript/JavaScript
  Backend & Data: Spring Boot, PostgreSQL, REST APIs
  Frameworks & Libraries: React, Express, Prefect
  Developer Tools: Git/GitHub, Postman, IntelliJ, AWS
  AI-Assisted Development: ChatGPT Codex, Copilot
